Mission Well Services Chooses Greenwell Energy Solutions' Secondary Containment for all of its FRAC Spreads

HOUSTON, June 4, 2013—[Greenwell Energy Solutions](#) (Greenwell), an independent specialty provider of proprietary-blended chemicals and environmental services, has been chosen by Mission Well Services, LLC (MWS) to provide secondary containment for its FRAC spreads located in the Eagle Ford and Woodbine areas. MWS is a hydraulic fracturing and coiled tubing service provider, with a focus in south Texas and the surrounding areas.

“In the past we used an off-the-shelf approach for MWS’s on-site containment, but it gave us a lot of headaches,” said Ben Bodishbaugh, COO of MWS. “We had to piece together smaller pre-cut liners to get containment large enough to meet our specifications. Service was also a problem. Containment crews would not stay on-site and if changes had to be made on-the-fly with equipment arrangement, then there was a potential for delays as we would have to call them back out to the well site. It complicated logistics and delayed operations.”

Greenwell is providing MWS with custom containment sized specifically for its jobs, so it is able to have one large containment solution, rather than several smaller ones put together. Using this custom approach, MWS saves costs and the number of containment walls is decreased. This reduces the opportunity for walls to be damaged by hoses and for personnel trips and accidents to occur.

“We staff our field service team to align with the often unpredictable nature of the oilfield industry,” said Ron Wagon, president of Greenwell. “With variable weather, multiple companies setting up equipment and general delays, we understand our customers can’t predict exactly when they need our team on-site and ready to set up services. We dedicate a trained crew for each and every job and our personnel stay on-site until the job is completed, even if they are waiting for an extended period of time.”

Greenwell’s containment solutions are ruggedized and designed specifically for the demands of the oilfield environment. With framed-steel walls that completely surround thick, 60 mil liners, Greenwell’s containment will not tear or be compromised when personnel and mobile equipment move in and out of the barrier.

About Greenwell Energy Solutions

Greenwell Energy Solutions is an independent specialty supplier delivering proprietary-blended chemicals, water treatment and environmental services for the upstream energy industry. Its services span well stimulation, pressure control systems and fully managed secondary containment that reduce clients' environmental impact and operating costs. Through unbiased testing at partner and third-party labs, Greenwell is able to ensure its solutions provide consistent quality, performance and durability. The company dedicates countless R&D hours to designing environmentally-friendly chemicals and solutions that perform reliably on every project. For more information, visit greenwellsolutions.com.

About Mission Well Services, LLC

Providing hydraulic fracturing and coiled tubing services, Mission Well Services is headquartered in Houston, TX with operational districts in San Antonio, TX and Fairfield, TX. MWS maintains approximately 325 employees led by a talented management team with substantial management experience in energy services. New, state-of-the-art equipment built and assembled for today's demanding unconventional reservoirs, on location expertise and a stellar safety rating set MWS apart from the competition. Currently MWS targets operations in Texas and all surrounding states. www.MissionWS.com.
