

GREENWELL ENERGY SOLUTIONS™

G-Terminator™ Well Stimulation Service

Blockages caused by scale, paraffin, drilling mud and other debris lower production. By removing fill and debris, customers can increase the connectivity of formations and improve production, both immediately and long-term.

The G-Terminator is a turnkey service that opens orifices by combining custom-blended chemicals, a patented oscillation tool, pump services and coil tubing or workover equipment. Unlike other solutions on the market, we coordinate all aspects of the service and oversee the project from start to finish. And the G-Terminator is proven more effective than ball outs, pin point injection packers and high-velocity jet tools.

Features

- Service executed within hours, without changing or drilling out pipe
- Unique design of tool produces oscillation as Greenwell chemicals are injected 200 times/sec
- Not limited by stand-off or hydrostatic limitations; effective in large diameter cased and open hole applications
- Tool is an all-inclusive, one-component mechanism indifferent to extreme temperatures or powerful chemicals

Benefits

- Fast, economical thru-tubing deployment with coiled tubing
- Restores and enhances porosity and permeability of the near wellbore area
- Enhances the use of chemicals through optimal placement and increased contact area
- Reliable—no elastomers or moving parts; compatible with wide ranges of treating fluids and temperatures

Applications

COMPLETIONS: PRE-FRAC

- Prepare environment prior to stimulation treatments
- Clean out wellbore and prepare formation for hydraulic fracturing

COMPLETIONS: POST-FRAC

- Remove deposits from perforations, frac extensions and near wellbore area
- Serve as primary stimulation of high permeability formations

PRODUCTION

- Clean out fill from open hole, casing or tubing
- Remove scale deposits from tubing, casing and the formation
- Prepare for gravel or frac packing
- Address post-production decline
