

GREENWELL ENERGY SOLUTIONS™

Chemicals

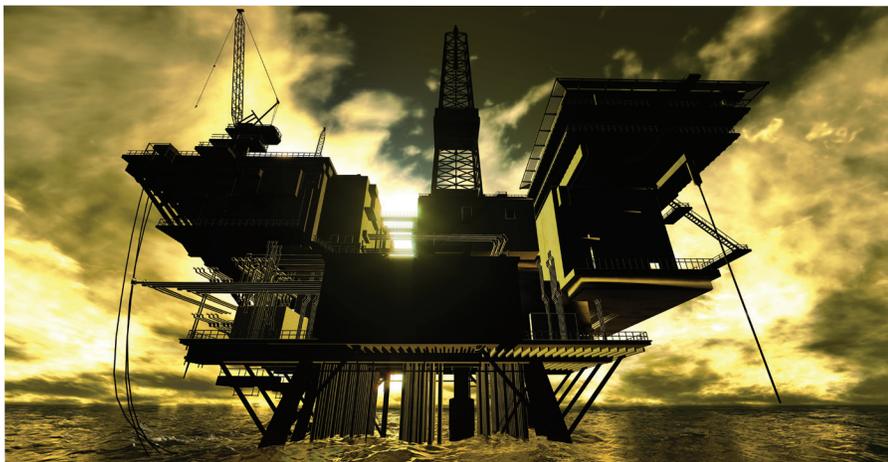

Greenwell Energy Solutions understands that you need consistent quality, performance, deliverability and support.

When looking to increase efficiency and impact the bottom line, Greenwell is your best source for specialty chemicals and service.

Our knowledgeable team has years of experience in oilfield chemical supply and best practices throughout the industry and is completely dedicated to providing customers with innovative, cost effective and efficient solutions. Through extensive testing at both in-house and third-party labs, Greenwell ensures that our customers receive the very best chemicals available in the marketplace. Using these same labs, Greenwell is able to custom design chemical solutions for virtually any environment. Greenwell dedicates countless R&D hours to designing environmentally friendly chemicals to replace many of the hazardous chemicals currently available whenever possible.

Results-driven products backed by unparalleled experience and personal service — that's what you should expect from your chemical supplier and that's exactly what gets delivered when you choose Greenwell Energy Solutions.

Our Mission Focus

IMPACT is our vow to our customers and to each other—

Integrity

Mission

Passion

Accountability

Courage

Transparency

Our promise is to consistently deliver superior chemical solutions that optimize performance!

GREENWELL™
ENERGY SOLUTIONS

Greenwell Energy Solutions is a project lifecycle partner delivering optimal performance through specialty products, oversight expertise and objective solutions adapted to our customer's specific challenges.

GREENWELL ENERGY SOLUTIONS™

Chemical Lines

Greenwell carries a full line of drilling, completion and production chemicals and additives, and also provides custom blending and chemical performance monitoring in the field.

Drilling specific chemical lines includes high-performance mud additives to reduce costs associated with lost circulation, stuck pipe, and shale instability while increasing the ROP and cuttings removal.

Completion specific chemical lines focus on hydraulic frac additives for fluid stability and efficiency, protection from wear and corrosion of tubulars and surface equipment, faster drill outs, lower pressures and better gel sweep performance and stability.

Our production chemicals are engineered to maintain production facilities, pipeline/flow line integrity, minimize maintenance and cleaning and protect with scavengers and inhibitors.

Custom blending solutions are available for paraffin, scale, corrosion and any other chemically treatable issue a Greenwell customer may face.

Greenwell Energy Solutions is your source for chemical solutions and services that you can count on to consistently improve performance and impact your bottom line.
