

GREENWELL ENERGY SOLUTIONS™

Overview

Greenwell Energy Solutions is a specialty chemical company dedicated to consistently delivering superior chemical solutions that optimize performance.

We service all stages of the upstream oil and gas industry with proven products and staff that our customers depend on to deliver reliable solutions to complex situations. We are totally dedicated to our client's mission, human safety and protecting our environment.

Greenwell's highly trained and knowledgeable team has over 50 years of industry experience in drilling, completion and production chemicals. At Greenwell, we believe in building long-term relationships with our customers by consistently providing the highest quality advice, products and services. Our long-term perspective makes Greenwell the reliable supplier that customers count on when performance, assurance and efficiency matter.

Dedicated to Impacting Efficiency by providing clients with innovative and cost effective solutions, we do not rely on individual products or even individual manufacturers. Instead we source the optimal products to solve specific situations through constant R&D

Our Mission Focus

IMPACT is our vow to our customers and to each other—

Integrity
Mission
Passion
Accountability
Courage
Transparency

Our promise is to consistently deliver superior chemical solutions that optimize performance!

Greenwell Energy Solutions is a project lifecycle partner delivering optimal performance through specialty products, oversight expertise and objective solutions adapted to our customer's specific challenges.

GREENWELL ENERGY SOLUTIONS™

Overview

of all available chemicals throughout the market using both in-house and independent third-party labs. This independence provides objectivity and assures our clients of the highest quality products tailored to your specific situation. While our chemical solutions might change more often than the competition, our clients receive the optimal solution that delivers results. By sourcing alternative supply streams for raw goods, specialty chemicals and blending services, we are able to provide a cost-effective solution without reducing optimal results. In addition, we are constantly expanding our product lines to address the changing needs of our customers.

Enhancing our products is Greenwell's legendary dedication to service. Our team has extensive experience in oil field service and we know what it takes to over-deliver in the field. We have facilities and staff located to optimize our service capabilities and to meet the often demanding time constraints in our industry. We are committed to working in the field with our clients which allows us to have a deeper understanding of your mission, your challenges and the optimal solutions that can be delivered.

Greenwell's secondary spill containment (SSC) products are critical tools to keep your workplace and the environment safe. SSC provides operators environmental assurance by applying a protective barrier below their oilfield operations as an added safeguard against the risk of the surrounding environment being exposed to hazardous contaminants. SSC also provides for a more efficient job site cleanup, while maintaining compliance with current and future EPA, SPCC, NPDES and other state and federal regulating agencies. Our clients save money on every site and have insurance against a damaging spill.

Protecting our environment and the safety of our employees, customers and the communities in which we work and live is the highest priority at Greenwell. Our commitment to HSE throughout all operations drives our rigorous training and education program, which must be understood and followed by every Greenwell employee and contractor. In addition, we seek to create IMPACT in all that we do. IMPACT is our vow to our customers and to each other — Integrity, Mission, Passion, Accountability, Courage and Transparency. Our promise is to consistently deliver superior chemical solutions that optimize performance!
