

### Quick Reel Nano is a high-performance lubricant that delivers protection from fatigue, wear and corrosion.

It is comprised of Greenwell's proprietary blend of "green," high-temperature lubricants enhanced with nanoparticle technology, a non-foaming surfactant, corrosion inhibitor and self-activating gellant.

This unique combination provides enhanced lubricity by lowering the coefficient of friction in both water- and oil-based fluid systems where dosage ranges of 0.5-3.0% by volume are applied. It shows no sign of degradation or loss of performance in temperatures up to 500°F.

Quick Reel's superior lubrication properties do not end downhole. It also provides significantly quieter and smoother running pumps, which extends the life of the fluid ends and other components.

### Additional Benefits

Greenwell's proprietary product also adds thermal stability and viscosity to gel sweeps, which:

- Aids in cuttings and sand removal
- Promotes clay control and shale stabilization

### Physical Properties

<b>Appearance:</b>	Brown to Black
<b>Odor:</b>	Characteristic
<b>Physical State:</b>	Liquid
<b>Solubility:</b>	Insoluble
<b>pH (as is):</b>	6.0-8.0
<b>Specific Gravity:</b>	1.00-1.10

### Handling and Storage

Provide ventilation. Refer to Material Safety Data Sheet (MSDS) for handling and hazard data.
